View points for spectators

You can also follow their progress using our club tracker which will be posted on facebook on the day/can be found on our club website

Green Island
First clear vantage point
La Rocque
Walk all the way to the end of the breakwater – there is quite a run of tide so the boat won't hang around for long!
St Catherines
They pass St Cats very quickly. Give yourself enough time to get down to the end of the breakwater!
North Coast
No major viewing points along the North Coast - the boat is very far out here
Groznez
Corbiere
Walk all the way down the causeway, when facing lighthouse, to your right you can watch them come across St Ouens bay – to your left down onto the rocks you can watch them come round Corbiere
Noirmont
Final place to see them, walk down and stand on gun tower, one of the clearest places to see them! BUT the minute they have gone past, head down to La Collette to the finish. Need to allow time to get through the traffic and the final stretch across the bay is a short one!

There can be a lot of sitting and waiting but also can be a mad panic to see them before they shoot past! Be prepared for an eventful day! - Pack some binoculars!
